## **EMS Contract Awarded**

NEWPORT NEWS, Virginia. – The U.S. Army Program Executive Office Enterprise Information Systems (PEO EIS) recently announced that FEDITC, LLC has been awarded a contract to acquire the services and materials for the Enterprise Management System (EMS) and the Army Training Help Desk (ATHD). The EMS and ATHD are part of the portfolio of the Product Manager Army Training Information System (PdM ATIS). The contract has a total expected value of \$26.8 million over the course of 57 months.

The EMS provides the support needed to make sure that the programs managed by PdM ATIS run smoothly. The hub of this support is maintained at the Enterprise Manager Center (EMC). The principle function of the EMC is to centralize management tasks required to maintain its global enterprise. The EMC also houses the ATHD.

“The EMC is the technology and communications focal point for the program and is vital to the success of PdM ATIS. This new contract with FEDITC, LLC will ensure that we are still providing the highest level of support and services to the Soldiers,” said Lt. Col. Jim Lee, product manager for ATIS.

FEDITC, LLC develops and manages mission critical national security systems and networks throughout the world, directly supporting the warfighter, Department of Defense leadership, and the United States.

FEDITC, LLC will continue the work at the EMC by providing 24/7 help desk support, asset tracking and manager and system and network monitoring. The EMC will also continue to handle the remote management of the Army Learning Management System, the Digital Training Facilities and the Deployed Digital Training Campus.

###

## **About PdM ATIS**

Product Manager (PdM) ATIS acquires, deploys and maintains a worldwide distributed learning system to ensure our nation's Soldiers receive critical training anytime, anywhere to ensure mission success.

PdM ATIS serves under the Project Manager, General Fund Enterprise Business System and the U.S. Army's PEO EIS. PEO EIS is responsible for project management of Department of Defense and Army business and combat service support systems, as well as related Army communication and computer infrastructure.
