| Change Description | | |
| Description of Change: | | |
| <p>Provide the capability enabling the system to broadcast a message Via an Instant Pop-up Window that will appear to all users currently logged in the system. A system administrator would create a notification containing important, time sensitive information that a user would need to know, and then "push" it to all users currently logged into the system. The Pop-up window will appear to the user regardless of what action is being performed within the system. The user must respond to the message (i.e. click "ok") before being allowed to continue in the ALMS application.</p> <p>The number of system administrators which can create, edit, and submit these messages should be limited.</p> | | |
| Need/Justification for Change: | | |
| <p>ALMS Managers and Administrators need enhanced methods to get important, time sensitive information to users. Currently users often have little opportunity to finish training or to suspend new training prior to updates to the system. Lack of notification prevents a user from making necessary preparations before a system downtime. Historically, the lack of notification has been a cause of user problems and large numbers of trouble tickets at the Help Desk.</p> | | |
| System Impact: | | |
| | | |
| Benefit/Savings of Implementing for this Change: | | |
| Provides a much needed tool that will greatly improve service to ALMS users and reduce load on the Help Desk | | |
